

AWARD OF RECOGNITION (2023)

Joshua Miller, Project Executive, ETC Building & Design

Joshua is an executive at ETC Building & Design and has completed more a large number of seismic retrofit work projects at dozens of California hospitals. These projects have work that ranges from materials testing, to structural and non-structural retrofit focusing on critical care spaces. These projects are often extremely complex and not only take place in sensitive environments but also under strictest engineering standards and under the highest regulatory parameters.

Joshua also led organizational support efforts to hospitals throughout the Covid-19 pandemic. He directed the process to get air scrubbers to locations where needed, the build of temporary facilities, and the repurposing of existing spaces into desperately needed clean rooms.

It is our pleasure to recognize Joshua Miller with the BICEPP Award of Recognition.
